I concur I do not see a need for media involvement at this time.

I feel a need to send out a voice again. Are we creating another round of NEW news stories around tar balls being from Line 901 before we have results?

It takes seven days to get results.

We have weeks of finger printing results so far showing non 901 oil.

What is the push to send out news releases before we know what the results are? Just trying to understand the reasoning.

I agree with changing the workding. I'd also be happy with "beaches that may have been affected," so that we don't have to explain why there are only negative results in any particular area...

Alexia,

Request an edit to the draft PR. (I used track changes to the draft attached).

Specifically, with respect to "beaches affected by the Refugio oil spill incident", I think that needs to be reworded to "beaches believed to have been affected". I think this is important, because, despite public perception, we have no evidence that supports the Orange County beaches were affected by Refugio Oil.

I also had one other very minor edit.

Thanks Alexia, I also have no objection to the plan if we follow what was discussed during our telecom.

v/r
CAPT Williams

Importance: High

UC,

I have had EU review, and USCG D11 review in combination with the media escort team. I think we have something that will work (this is version 1).

I understand that exact agency participating for testing samples is still evolving, but the release focuses upon the activity enough that I don't think the final outcome of that decision will affect this.

Please advise of changes or concerns.

Thank you so much for the help!

Alexia
